(2) 《Appendix》 Change of Ordinary profit (Bank total / FY19 Plans and Results)

Shareholder Return Policy

We will target a Total Return Ratio^(*1) of 30% or more while taking into account both the maintenance of solid capital levels for future growth and the appropriate distribution of profits to our shareholders. We will continue to consider the dividend level.

(*) Total Return Ratio = (Total amount of dividends + Total amount of acquisition of own shares) / Net income(*1)

Capital Adequacy Ratio

 Ashikaga Bank started to calculate each risk-weighted asset according to foundation internal rating-based approach(FIRB*1).
 (3) Capital adequacy ratio

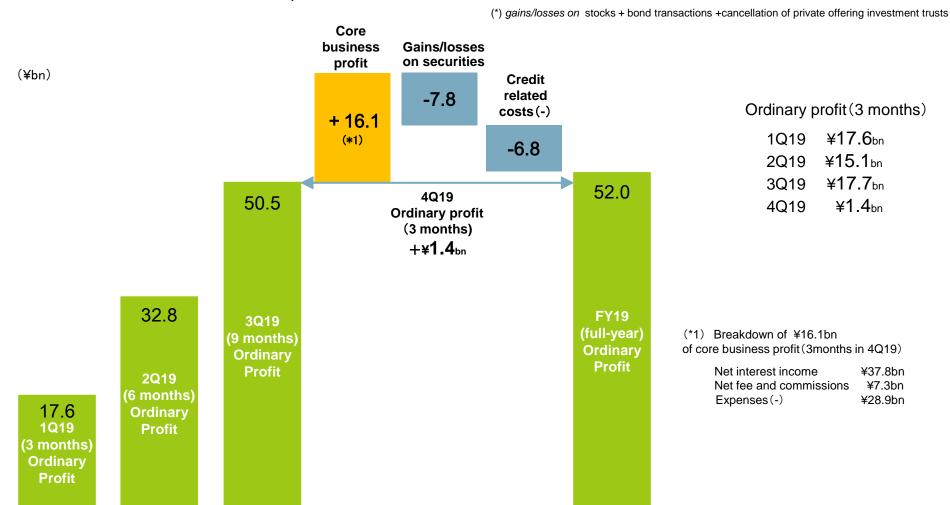

| | Mebuki FG (Consolidated) | Joyo (Consolidated) | Ashikaga (Consolidated) |
|-------|-----------------------------|------------------------|----------------------------|
| FYE17 | 10.38% | 11.80% | 8.71% |
| FYE18 | 9.94% | 11.91% | 8.55% |
| FYE19 | 10.95% | 12.22% | 9.45% |

(*1)FIRB, calculation procedures to measure risk-weighted assets related to capital adequacy ratio, is more advanced approach than Standard Approach using prescribed weight by FSA. Although FIRB can reflect the changes of credit risk more accurately, there is a need to establish rigorous internal control system and to be approved by FSA.
